

USER'S MANUAL - *Magnetic compass for navigation RIVIERA type PRISMA 2" 1/4*

Dear Customer,

in thanking you for your preference and trust in our products, we wish to inform you that this marine magnetic compass has been designed and built to perfection in the RIVIERA srl factory in Genoa. After manual assembly, it was subjected to tests and quality controls in accordance with the requirements of the Italian shipping register, RINA. It is made with materials that have proven to guarantee its functioning aboard boats for many years.

Keep this manual together with the on-board documents.

Installation

PRISMA hand bearing compass is simple, fast and accurate. Plot your position by sights or bearings on distant landmarks. On-off switch on the handle controls the self-contained battery that is particularly useful on faint lighting conditions, Prisma compass may be used as a steering compass being hold in a vertical position by a handy bulkhead clip.

Maintenance

Clean the Riviera compass with a soft cloth moistened with fresh water. Don't wash with solvents. In case an air bubble should appear in, turn the compass up, gently, pat it with the fingers. (Fig.1).

When storing for long periods put it away in the optional wooden box taking care of removing the dry battery. To replace the lamp or the battery unscrew the screw on the bottom of the handle (Fig.2). Then pull the string to have the lamp holder and battery out (Fig.3).

Replace the concerned item and repeat the above mentioned operations in the inverse sequence.
