

Rule Shower Drain Box

800 & 1100 GPH SHOWER DRAIN SUMP

Our customers designed the new shower drain box.

We talked to boat builders, listened to customers at boat shows and took notes when they called us. When it came time to redesign the shower drain box with new, stronger Rule bilge pumps, we put our plan into action. Great thought went into the design to make it easier for our customers to install and service our new Rule Shower Drain Box.

Our new designs include:

Polycarbonate Snap Lid Cover - tough impact resistant material plus it's easier to remove

Gasketed Cover - helps prevent water from spilling over the edge of the box while underway

Several Mounting Options - easier to install, especially with the new rear mounting flange - install the flange and anchor any of three sides

Cut Guides and Drill Points - we've added clear cut lines and drill point indents to the intake ports to make installation easier

Friction Fit Pump and Switch - no more screws to fiddle with, the pump is a friction fit and the float switch snaps into the base

Threaded Port Fittings - improves installation by offering several combinations of port fittings including 3/4", 1", 1 1/8", straight and 90° elbow fittings plus we now offer 3/4" and 1" straight and elbow Flow-Rite fittings

Easy Clean Strainer - new scoop strainer allows you to easily get your hand under the strainer to clean the debris from the box

Larger Joker Valve - allows full flow through the plumbing which means more flow at higher head heights

Rule brand builds on over 50 years of operational excellence and application expertise with a broad range of solutions for the marine industry.

ISO 8849 Marine (Electric bilge pumps)
ISO 8846 Marine (Ignition protection)
